

ABSTRACT OF DISCLOSURE

This invention describes a tool used for masking tiling grout to an area. This template tool consist of a body (3) and a cutout area (2). The template may also consist of a handle (1). The cutout area (2) is of any shape on the body (3). The handle (1) is attached to the top of the body (3). The essence of the grout masking template is to allow a person skilled in the art to apply grout to spaces between tiles without causing grout residue on other parts of the tiling area. The cutout area matches the spaces between tiles. They match in such as way that when placed on top of each other, they would align perfectly. A person can then apply grout on top of the template and then forces the grout through the cutout area (2).
